CONTA-CLIP: thinking ahead for connection systems

CONTA-CLIP was founded in 1978. We operate globally as an owner-operated medium-sized company.

Users of electrical and electronic connection systems rely on our reliable products and our many years of industrial and global market expertise.

Our company is now one of the most important manufacturers in the field.

For over 40 years, our components and solutions have been used in various process and industrial automation applications, including: railway technology, materials handling, building automation, air conditioning, mechanical and facility engineering, measurement and control technology, control panel construction, shipbuilding, transformer construction and environmental technology.

Over the years, we have evolved into an innovator that sets the tone with new ideas and creative impulses.

Our employees come from a wide variety of industries and view themselves as true connectivity specialists. They understand the specific problems, requirements and challenges of our customers. This results in communication among equals.

The profits then flow into the development of new products as well as into modern, efficient manufacturing processes.

A high quality standard throughout all departments is our number one priority.

Our top-class products are supported by this interplay between top-class men and machinery. We have also designed our range of services to align with customer needs.

Our products are divided into six categories: CONTA-CONNECT for terminal blocks and accessories, KDS cable management systems, CONTA-ELECTRONICS for electrical and electronic switchgear cabinet components, CONTA-LABEL for marking systems, CONTA-BOX for housings, and CONTA-CON for PCB terminal blocks and connectors.

We design customer-specific solutions for electronics, provide completely assembled housings and assemblies as needed, assemble terminal blocks for series production, and quickly handle component labelling tasks.

We greet these challenges with passion and enthusiasm, because we see each customer as our partner.

CONTA-CLIP customer representatives are always ready to offer their support to the customer, because service and helpfulness are rooted deeply in our corporate philosophy.

Advantage online: the CONTA-CLIP Online Catalogue

No matter where you are, as long as you're online you can access our digital catalogue to look at our services and quickly identify suitable solutions for your requirements.

Fast results Use the full-text search, enter an order number or use the convenient "step-by-step" feature search function.

Project planning at a glance: After you've selected the products, all the master data for the materials (sales data, technical data, drawings, connection diagrams, classifications and approvals) are made available as a data sheet or export file.

Detailed inquiries about components can be sent via the shopping cart directly to our headquarters. Upon request, you will receive an e-mailed copy of your inquiry.

Application films: Complex functions be explained easily and clearly with sounds and images.

Printed catalogue: Would you like an offline overview? Please ask for our free printed catalogues.

Industry-specific: You will find the solutions that are relevant for your industry, according to your expertise.

Newsletter: Do you want to stay up to date? Subscribe to our newsletter! Simply register, confirm our authentication e-mail, and you'll be regularly informed about all CONTA-CLIP news.

Discover how the world of CONTA-CLIP and our website can deliver added value for you and your projects!

Globally available for you

Are you working abroad? No problem. Our worldwide sales and distribution partners help us to be globally networked and provide on-time reliable deliveries. Simply scan the QR code shown and you'll learn on our website about the sales partner responsible for your country.

A complete line of products to meet your demands

The CONTA-CLIP Catalogues

01 CONTA-CONNECT

Terminal blocks with Push-in connection system

Our wide range of innovative PRK and FRK terminal blocks with the Push-in connection system include feed-through terminals, PE terminals, disconnect terminals, fused terminals, multi-level terminals, installation terminals and initiator terminals, for conductor cross-sections from 0.2 mm² to 25 mm².

Cat. no. 98070.2

02 CONTA-CONNECT

Terminal blocks with screw connections and special terminals

Everything for classic wiring with screw connection systems (also for high currents): SRK feed-through and PE terminals, RK high-temperature variants, TK transformer terminals, HSK high-power stud terminals, SVB series screw distributor blocks, and the modular feed-through terminal systems from the SDK series.

Cat. no. 98071.2

03 CONTA-CONNECT

Terminal blocks with tension-spring connection

Our versatile line of terminals with tension spring connections for conductor cross-sections from 0.2 mm² to 16 mm² includes: the ZRK/ZSL series of feed-through and PE terminals, the double-level ZRKD/ZSLD, the ZIKD three-level terminal blocks, motor-connection terminals, (blade-) disconnect terminals, fused terminals, direct-mount terminals, and initiator/actuator terminals for transmitting positioning, encoder and alert signals.

Cat. no. 98072.2

04 CONTA-CONNECT

Installation materials and other accessories for terminal blocks

Our installation products include cabling ducts, assembly tools, cable glands with metric or PG threads, DIN rails, rail holders, rail cutters and punching tools. The terminal block accessories include different versions of end stops, wire-end ferrules, and connectors.

Cat. no. 98073.2

05 CONTA-LABEL

Marking components for thermal-transfer marking systems

CONTA-CLIP provides the TTPCard thermal-transfer printer and a large selection of PC, PVC and PVCF markers or labels in card format: for professional, permanent labelling of terminals, devices, conductors, cables, facilities and switchgear cabinets.

Cat. no. 98074.2

Our catalogues are available in many languages!

06 CONTA-LABEL

Marking components for ink-based marking systems

The CONTA-LABEL products provide polyamide markers for labelling conductors, cables, devices and facilities with ink print. These markers are available in many shapes and colours: in the classic MC Maxicard format for self-printing with the EMS plotter system EMS or other ink-jet systems, or ready-to-use customized printed in the PMC Pocket-Maxicard format.

Cat. no. 98075.2

07 CONTA-BOX

Housings

Our wide variety of housings made of polystyrene, polycarbonate, polyester, ABS and aluminium deliver solutions for protecting electronic circuits, integrated devices and terminal blocks. On request, the housings can be custom-processed and assembled with our CONTA-CONNECT, CONTA-ELECTRONICS and CONTA-CON product lines.

Cat. no. 98076.2

08 KDS CABLE MANAGEMENT SYSTEMS

KDS cable entries | KES cable entries | SAB|SSAB|SABK shielding solutions

The KDS and KES cable entries enable a tool-free, IP66-sealed feed-through for unassembled and assembled cables and hoses. The feed-through openings can be adapted at any time to meet your requirements. The SAB shield-connection clips can be used to provide a reliable shield contact with conductor diameters from 3 mm to 35 mm.

Cat. no. 98077.2

09 CONTA-ELECTRONICS

Electrical and electronic cabinet components

Our CONTA-ELECTRONICS products provide active and passive components for the transfer and conversion of analogue and digital signals at the coupling level. This product line includes power supplies, multi-function timing relays, coupling relays, digital switching modules, interface modules, opto-couplers, signal converters, GSM communication modules and much more.

Cat. no. 98078.2

10 CONTA-CON

PCB terminals and connectors

This catalogue presents our wide variety of CONTA-CON PCB terminal blocks and connector systems. The modular components can be configured for any required number of poles; They are available in the wire connection types: wire protection, eccentric, clamping yoke, and (for demanding operating conditions) with tension-spring or Push-in wire termination.

Cat. no. 98079.2

Push-in connection system PRK | PSL

Push-in connection system

The terminal blocks **PRK** with Push-in connections feature optimisations that existing systems do not have.

Despite the high contact force of the push-in spring, the CONTA-CLIP solution enables solid wires as well as stranded wires with wire-end ferrules to be safely terminated using less insertion force.

Opening the clamp to release the wire is done using the integrated / insulated pusher that ensures that pressing the clamping point is safe. This gives you a noticeable time advantage during the wiring process. The extremely compact terminals ensure a high current-carrying capacity, absolute secure fit and the highest level of stability. The new feed-through and protective-earth terminals are available in 6 cross-section

ranges from 1.5 mm² to 16 mm² in 2-, 3- and 4-wire connection variants for wire cross-sections of 0.34 mm² to 25 mm² and are therefore an optimum supplement to the proven **FRK** Push-in connection system with its extensive functional terminal product range of double-level, initiator, disconnect, fuse and installation terminals. All of the insulating materials used in these product lines are free of pollutants. They also comply with flammability class V-0 (self-extinguishing) according to UL 94.

The advantages

- Wire insertion requires no tools
- Less insertion force
- Built-in insulated pusher for disconnecting the wire
- Double cross-connect option
- Test pick-off at each potential
- PE foot contact on both sides
- Comprehensive marking options

Features

- Push-in connection system
- Feed-through and PE terminals up to 16 mm²
- Pluggable cross-connection system PQI
- Material: PA6.6 UL 94 V-0

Features

a The wire connection / contact reliability

The push-in spring at the wire connection is held securely by the positioned busbar.

- The stainless steel spring provides permanent contact force between the wire and the busbar.
- Clear separation of electrical and mechanical functions.
- The busbars are made from copper with surface coating (tin)
- Resistant to vibration and maintenance-free
- Corrosion-free
- Space-saving design

b Wiring is simple and quick – no tools needed for the push-in connection

- Easy to work with
- Connection without tools
- Generous wire-entry geometry
- Secure against faulty connection thanks to pushers
- Easy to operate, even under cramped working conditions, because of the TOP connection
- Saves time and money
- PE foot contacts on both sides – can be snapped on (no screws) to **TS 35x7.5** and **TS 35x15** rails.

c Pluggable cross-connection options

Distributing potentials with the pluggable **PQI** cross-connection system is quick and easy. Two cross-connection channels allow two voltages to be fed across when working with the standard terminals with rated cross-sections of 1.5 mm² and 10 mm².

- Simple to insert and thus quicker to install
- No insulation plate or partition plate is required between neighbouring cross-connections, since the **PQI** has a touch-safe protective design.
- The cross-connections can carry the full rated current and rated voltage of the corresponding terminal block.
- Individual terminals can be skipped over by breaking out contact pins in the cross-connector.

d Housing insulation material

- Polyamide PA6.6 UL 94, flamm. class V0, self-extinguishing without burning drops
- Free of hazardous materials such as halogen or phosphor
- Creepage resistance: CTI 600
- Operating temperature from -40°C to +120°C

e Marking options

Three marking options per clamp.
Different labelling systems can be used

An overview of the advantages

Connection without tools

The PRK Push-in connection requires less insertion force. This makes it easy to insert solid or stranded wires with wire-end ferrules. The rated cross-sections specified in our documentation correspond to a connection with stranded wires using wire-end ferrules. It is also possible to use solid wires up to the next larger cross-section size.

Wire connection and separating the contact

A faulty connection is avoided by colour-contrasted and insulated pushers. The Push-in spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. The pusher can be pressed to open the clamp to release the wire or to insert stranded wire without ferrules.

Cross-connection system

The PQI insulated cross-connections have a pluggable design and available with 2, 3, 4, 10 and 20 poles, they cross connect up to the rated current of the relevant PIKD terminals.

Potential distribution

Using the double cross-connection channels, any number of terminals can be connected with each other using two-pole cross connectors PQI.../2.

Skip-over bridging

It is possible to skip over terminal blocks by breaking out individual contact poles. Separated contact elements can be labelled using the plastic insulation of the cross-connector.

An overview of the advantages

Labelling

High-quality, quick and concise labelling is possible when using the **SB**, **BSTR** and **MC** labelling systems. The standard terminals feature up to four labelling channels.

An effective and comprehensive range

Feed-through and protective-earth terminals are available in 6 cross-section ranges from 1.5 mm² to 16 mm² in 2-, 3- and 4-wire connection variants for wire cross-sections of 0.34 mm² to 25 mm². The standard feed-through terminals from 1.5 mm² to 16 mm² feature two cross-connection channels. 2.5mm² double-level, three-level and motor connection terminals have been added to the product range.

A comprehensive line of accessories

- DIN rails
- Mechanical attachment | End stops
- Group marker holders
- End plates | Visual separation
- Cross-connections (potential distribution)
- Covers

Push-in connection system

Double-level terminal blocks PRKD 2.5 | Double-level PE terminals PSLD 2.5

With a width of just 5 mm, the new **PRKD 2.5** series is available in 5 versions and connects with stranded or solid wires up to 4 mm² with a rated current of up to 22 A. Solid wires and flexible wires with wire-end ferrules can be inserted into the push-in connection system without the need for tools. The Push-in spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. The integrated insulated pusher can be used to open the clamp to release the wire or to insert stranded wire without ferrules.

CONTA-CLIP's PE foot, which contacts the PE potential to the DIN rail, is designed to make contact on both sides. This **CONTA-CLIP** design does use more material but it offers an advantage in terms of additional safety and security for the

PE conductor's contact. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot. Each of the double-level terminal blocks can be equipped with the standard accessories: the **PQI 2.5** (cross connector) and the **PC SB 5** (quick marking system).

The advantages

- Wire insertion requires no tools
- Less insertion force
- Built-in insulated pusher for disconnecting the wire
- Cross-connect option at any level
- Test pick-off at each potential
- PE foot contact on both sides

Features

- Push-in connection system
- Feed-through and PE terminals up to 2.5 mm²
- Pluggable cross-connection system PQI
- Colour labelling
- Material: PA6.6 UL 94 V-0

Features

Wire connections

Solid wires and flexible wires with wire-end ferrules can be inserted into the connection mechanism without the need for tools. A faulty connection is avoided by colour-contrasted and insulated pushers. The Push-in spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. The pusher can be pressed to open the clamp to release the wire or to insert stranded wire without ferrules. (Connection cross-section 2.5 mm², rated current 22 A)

Cross-connection system

The upper and lower levels can be cross-connected using the **PQI 2.5/...** standard cross-connectors. The **PQI** insulated cross-connections have a pluggable design. And available with 2, 3, 4, 10 and 20 poles. They cross connect up to the rated current of the relevant **PRKD** terminals.

Colour labelling

The upper and lower levels are colour-coded. (e.g., **PRKD 2.5/PE/L/N**)

Connecting the PE foot onto the DIN rail

As with all CONTA-CLIP PE terminals, the **PSLD** terminals also implement a two-sided contact with the DIN rail. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.

Push-in connection system

Three-level terminal blocks PIKD

Three-level terminal blocks PIKD 2,5

The **PIKD 2.5** terminal blocks have a width of only 5 mm and are available in a variety of designs. They have three levels with six connection points and can handle solid or flexible wires up to 2.5 mm² with a rated current up to 22 amps. The lower level is designed as a feed-through or PE connection. All levels can be cross-connected to neighbouring terminal blocks.

The advantages

- Wire insertion requires no tools
- Less insertion force
- Built-in insulated pusher for disconnecting the wire
- Cross-connect option at any level
- Test pick-off at each potential
- PE foot contact on both sides

Features

- Push-in connection system
- Feed-through and PE terminals up to 2.5 mm²
- Pluggable cross-connection system PQI
- Colour labelling
- Material: PA6.6 UL 94 V-0

Features

Wire connections

Solid wires and flexible wires with wire-end ferrules can be inserted into the connection mechanism without the need for tools. A faulty connection is avoided by colour-contrasted and insulated pushers. The Push-in spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. The pusher can be pressed to open the clamp to release the wire or to insert stranded wire without ferrules. (Connection cross-section 2.5 mm², rated current 22 A)

Cross-connection system

The upper and lower levels can be cross-connected using the **PQI 2.5/...** standard cross-connectors. The **PQI** insulated cross-connections have a pluggable design. And available with 2, 3, 4, 10 and 20 poles. They cross connect up to the rated current of the relevant **PIKD** terminals.

Colour labelling

The upper and lower levels are colour-coded. (e.g., **PIKD 2.5/PE/L/N**)

Connecting the PE foot onto the DIN rail

As with all CONTA-CLIP PE terminals, the **PIKD** terminals also implement a two-sided contact with the DIN rail. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.

[illegible]

Push-in connection system

Motor-connection terminals PVMAK

The **PVMAK** 2.5 has a width of only 5 mm. It has four levels with seven connection points and can handle solid or stranded wires up to 2.5 mm² with a rated current up to 22 amps. The lower level is designed as a PE connection. The PE foot contacts both sides of the DIN rail, thus ensuring optimal electrical security. The **ZVMAK** motor-connection terminal can be cross-connected at all levels using the **PQI** 2.5 cross connector.

PE foot on both sides

The advantages

- Wire insertion requires no tools
- Less insertion force
- Built-in insulated pusher for disconnecting the wire
- Cross-connect option at any level
- Test pick-off at each potential
- PE foot contact on both sides

Features

- Push-in connection system
- Motor-connection terminal 2.5 mm²
- Pluggable cross-connection system PQI
- Material: PA6.6 UL 94 V-0

Push-in connection system

- Foot base can be snapped on TS 35 DIN rail
- Housing made of polyamide 6.6 UL 94 V-0

Push-in connection system FRK | FSL

Push-in connection system

CONTA-CLIP offers an innovative line of products with the push-in connection system. They range from the smallest cross-sections of 0.2 mm² to 16 mm² in feed-through and PE through to the double-level, disconnect, fuse, initiator and installation terminal versions.

This system can be used for a large variety of applications with only a minimal number of accessory parts. The Push-in-Top connection provides safe and quick connections for solid and stranded wires, with or without wire-end ferrules. Our well-designed line of accessories allows you to significantly reduce your installation and storage costs. The **FQI** pluggable potential distribution system can be used to multiply potential voltages vertically.

For this product line, CONTA-CLIP uses pollutant-free insulating material with a V-0 flammability class that is self-extinguishing in accordance with UL 94. As with all CONTA-CLIP PE terminals, the **FSL** terminals also implement a two-sided contact with the DIN rail. In all the **FSL** series, the foot construction and busbar are made of a single piece of copper. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.

The advantages

- Wire insertion requires no tools
- Less insertion force
- Cross-connect option at any level
- PE foot contact on both sides
- Comprehensive marking options

Features

- Push-in connection system
- Feed-through and PE terminals 16 mm²
- Separating the contact via screwdriver
- Pluggable cross-connection system FQI
- Material: PA6.6 UL 94 V-0

Features

a The wire connection / contact reliability

The push-in spring at the wire connection is held securely by the positioned busbar.

- The stainless steel spring provides permanent contact force between the wire and the busbar.
- There is a clear separation of electrical and mechanical functions.
- The busbars are made from copper with surface coating (tin)
- One-piece construction of busbar and PE foot contact with no contact resistances
- Resistant to vibration and maintenance-free
- Corrosion-free
- Space-saving design

b Easy and safe to wire with an established connection system

The easy-to-operate push-in connection mechanism – for solid and fine-stranded wires with wire-end ferrules – reduces wiring time by up to 80 %.

- Easy to work with
- Connection without tools
- Generous wire-entry geometry
- Easy to operate, even under cramped working conditions, because of the TOP connection
- Saves time and money
- PE foot contacts on both sides – can be snapped on (no screws) to **TS 35 x 7.5** and **TS 35 x 15** rails.

c Pluggable cross-connection options

Distributing potentials with the pluggable **FQI** cross-connection system is quick and easy. Two cross-connection channels allow two voltages to be fed across when working with the standard terminals with rated cross-sections of 1.5 mm², 2.5 mm² and 4 mm².

- Available with from 2 to 10 poles
- Simple to insert and thus quicker to install
- No insulation plate or partition plate is required between neighbouring cross-connections, since the **PQI** has a touch-safe protective design.
- The cross-connections can carry the full rated current and rated voltage of the corresponding terminal block.
- Individual terminals can be skipped over by breaking out contact pins in the cross-connector.

d Housing insulation material

- Polyamide PA6.6 UL 94, flamm. class V0, self-extinguishing without burning drops
- Free of hazardous materials such as halogen or phosphor
- Creepage resistance: CTI 600
- Operating temperature from -40 °C to +120 °C

e Marking options

One marking option per connection. If both cross-connection channels are not being used, two additional markers can be positioned with the standard terminals of 1.5 mm² to 4 mm².

An overview of the advantages

Connection without tools

The **FRK** Push-in connection requires much less insertion force. This makes it easy to insert solid or stranded wires with wire-end ferrules. The rated cross-sections specified in our documentation correspond to a connection with stranded wires using wire-end ferrules. It is also possible to use solid wires up to the next larger cross-section size.

Releasing and separating the contact

A standard screwdriver can be used to open the push-in spring and separate the wire contact or the connection of the stranded wires with wire-end ferrules.

Cross-connection system

When using a doubled cross-connection channel, the two-pole **FQI.../2** cross-connectors can be used to connect any number of terminals with each other.

Potential distribution

The cross-connector is available with from 2 to 10 poles. Two cross-connection channels allow two voltages to be fed across when working with the standard terminals with rated cross-sections of 1.5 mm², 2.5 mm² and 4 mm².

Skip-over bridging

It is possible to skip over terminal blocks by breaking out individual contact poles. Separated contact elements can be labelled using the plastic insulation of the cross-connector.

Power feed with small cross-sections

Push-in terminals with larger cross-sections and standard cross-connectors can connect to a single terminal of the next size up for the power feed-in. The **FQI** cross-connection system can carry the rated voltage and rated current.

An overview of the advantages

Labelling

High-quality, quick and concise labelling is possible when using the **PMC SB**, **PMC BSTR** or **MC** labelling systems. The standard terminals feature up to four labelling channels.

Special marking options

For the multi-level terminals, in addition to the standard holder in the terminal housing you can also make clear labels – even when the terminal is wired up – by using the **FBA** identification adapter. The pluggable **FBA** is attached to the middle of the terminal housing.

An effective and comprehensive range

The feed-through and PE terminals with cross-sections of 1.5 mm², 2.5 mm² and 4 mm² are available in two-wire, three-wire and four-wire versions. The standard feed-through terminals in 1.5 mm², 2.5 mm² and 4 mm² feature two bridging channels. The product line also includes standard terminals and functional terminals including fused terminals, initiator terminals, disconnect terminals and installation terminals.

A comprehensive line of accessories

- DIN rails
- Mechanical attachment | End stops
- Group marker holders
- End plates | Visual separation
- Cross-connections (potential distribution)
- Covers

Double-level terminal blocks FRKD 2.5 | Double-level PE terminals FSLD 2.5

Push-in connection
system

With a width of just 5 mm, the new **FRKD 2.5** series is available in 13 versions and connects with stranded or solid wires up to 4 mm² with a rated current of up to 24 A. Solid wires and flexible wires with wire-end ferrules can be inserted into the push-in connection system without the need for tools. The Push-in spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. A standard screwdriver can be used to open the clamp for release or for the insertion of stranded wire without ferrules. CONTA-CLIP's PE foot, which contacts the PE potential to the DIN rail, is designed to make contact on both sides. This **CONTA-CLIP** design does use more material but it offers an advantage in terms of additional safety and security for the PE conductor's contact. In all the **FSL**

series, the foot construction and busbar are made of a single piece of copper. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot. Each of the push-in terminal blocks can be equipped with the standard accessories: the **FQI 2.5** (cross connector) and the **PMC SB 5** (Pocket-Maxicard quick marking system).

The advantages

- Wire insertion requires no tools
- Less insertion force
- Cross-connect option at any level
- PE foot contact on both sides
- Comprehensive marking options

Features

- Push-in connection system
- Feed-through and PE terminals 2.5 mm²
- Separating the contact via screwdriver
- Pluggable cross-connection system FQI
- Material: PA6.6 UL 94 V-0

Features

Wire connections

Solid wires and flexible wires with wire-end ferrules can be inserted into the connection mechanism without the need for tools. The Push-in spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. A standard screwdriver can be used to open the clamp for release or for the insertion of stranded wire without ferrules.

(Connection cross-section range 4 mm², rated current 24 A)

Cross-connection system

The upper and lower levels can be cross-connected using the **FQI 2.5/...** standard cross-connectors. The **FQI** insulated cross-connections have a pluggable design. They are available with from 2 to 10 poles.

They cross connect up to the rated current of the relevant **FRKD** terminals.

Colour labelling

The upper and lower levels are colour-coded. (e.g., **FRKD 2.5 N-PE**)

Connecting the PE foot onto the DIN rail

As with all CONTA-CLIP PE terminals, the **FSLD** terminals also implement a two-sided contact with the DIN rail. In all the **FSL** series, the foot construction and busbar are made of a single piece of copper. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.

Double-level terminal blocks with three connections per level

The **FRKD 2.5/3A** and the **FSLD 2.5/3A** have a width of 5 mm. Up to six stranded or solid wires up to 4 mm² can be connected, with a rated current up to 24 amps. (Page 50)

Push-in connection system

Fuse-disconnect terminals FSIK

The fuse-disconnect terminals **FSIK** feature an extraction lever that locks into its end position. This allows a spare fuse to be attached inside or an illuminated display to be mounted.

One cross-connection channel within the fuse-disconnect terminals allows for a potential to be distributed to adjacent fused terminals from the **FSIK** series! For multiplying the potentials, we offer the **FQI** standard connection system, available with from 2 to 10 poles. Two or three disconnect levers can be coupled and operated simultaneously by using the **VBS** connection sleeves

Versions are available with or without the status display.

The advantages

- Wire insertion requires no tools
- Less insertion force
- Cross-connect option at any level
- Comprehensive marking options
- Integrated status display or space for spare fuse

Features

- Push-in connection system
- Fused terminals 4 mm²
- Separating the contact via screwdriver
- Pluggable cross-connection system FQI
- Material: PA6.6 UL 94 V-0

Disconnect-blade terminals | Disconnect terminals | Fused-disconnect terminals FTRK

Push-in connection system

The **ZTRK** base terminal product line can be combined in different ways with the product-related line of accessories as two-wire and three-wire variants. Without any assembly, the two base terminals can receive auto-fuses or diode plugs. Alternatively, the base terminals are available equipped with a disconnect blade or a fuse holder for G fuses. The functions of all versions can be changed by removing or adding the disconnect blade, the fuse holder, or the diode plug. The plug-in fuse holders are available as models with or without a status display. They offer great flexibility, easy handling and a wide selection of 5x20 G fuses. Solid wires and flexible wires with wire-end ferrules can be inserted into the connection mechanism without the need for tools. The Push-in spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. A standard screwdriver can be used to open the clamp for release or for the insertion

of stranded wire without ferrules. For the fuse and disconnect terminals with push-in connections, there are eight terminals blocks with disconnect blades and disconnect plugs available in the push-in connection system, as well as a fuse holder for auto-fuses and micro-fuses. Each of the push-in terminal blocks can be equipped with the standard accessories: the **FQI 2.5** (cross connector) and the **PMC SB 5** (Pocket-Maxicard quick marking system).

The advantages

- Wire insertion requires no tools
- Less insertion force
- Comprehensive marking options
- Modularity thanks to replaceable functional elements

Features

- Push-in connection system
- Neutral disconnect terminals/ fused terminals 2.5 mm²
- Separating the contact via screwdriver
- Pluggable cross-connection system FQI
- Material: PA6.6 UL 94 V-0

Features

Wire connections

Solid wires and flexible wires with wire-end ferrules can be inserted into the connection mechanism without the need for tools.

The Push-in spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. A standard screwdriver can be used to open the clamp for release or for the insertion of stranded wire without ferrules.

Disconnect terminals FTRK 2,5/.../MT and FTRK 2,5/.../ST

In the push-in connection, two models (disconnect-plug/disconnect-blade) are available in the base terminal variations of 2- and 3-conductor systems. The proven **ZDS|ZTR** disconnect-plug and **FTRK 2,5/.../MT** disconnect-blade systems with high surface quality and, therefore, low and stable transitional resistance, ensures accurate measurement results. They distinguish themselves by their narrow construction of only 5 mm and a high current capacity of 18 A. In addition to the **ZTR** disconnect-plug models (feed-through connection), **ZDS** diode plugs (1N4007) are also available. It is easy to distribute potential voltages in combination with the pluggable **FQI** cross connectors.

Fuse holders for auto-fuses/micro-fuses FTRK 2.5/.../OT and FTRK 2.5/.../ZS

The base terminals can hold auto-fuses without needing any accessories. With the fuse plug **ZS/H**, available in five variations, 5 x 20 fuses can be accommodated. The fuse plugs are available in variations with or without status display (different voltage ranges). With a rated voltage of 400 V, the rated current of the fuse plug is 6.3 A. In combination with the pluggable **FQI** cross connectors, it is easy to distribute voltage potentials.

Cross-connection FQI

The **FQI** insulated cross-connections have a pluggable design and are available with from 2 to 10 poles. They cross connect up to the rated current of the relevant **FTRK** terminals.

Push-in connection system

Three-wire functional terminals FDLI

The FDLI three-wire functional terminals offer a wide range of functions and many different application possibilities at a width of 5.1 mm.

The base terminals of the new FDLI 2.5-4 series are available in eight different versions. Our products offer users the best solution for all applications: whether they are using our feed-through terminals, feed-through terminals with disconnect-blade or the empty terminal versions together with custom-fit accessories.

The advantages

- Wire insertion requires no tools
- Less insertion force
- PE foot contact on both sides
- Comprehensive marking options
- Modularity thanks to replaceable functional elements

Features

- Push-in connection system
- Three-wire functional terminals 4 mm²
- Separating the contact via screwdriver
- Pluggable cross-connection system FQI
- Material: PA6.6 UL 94 V-0

Features

Wire connections

Solid wires and flexible wires with wire-end ferrules can be inserted into the connection mechanism without the need for tools. Max. connection cross-section is 4 mm². The **FQI** cross-connections have a pluggable and insulated design (available from 2 to 50 poles). They cross-connect up to the rated current of the **FDLI** terminals.

Modularity thanks to functional elements

Without the need for any additional accessories, the **FDLI 2.5-4 OT** base terminals can be fitted with: the **SI C** automotive fuses, the **ZS/H** fuse plugs (for 5 x 20 mm micro-fuses) with or without LED, or the **ZDS** isolator and component connectors.

Connecting the PE foot onto the DIN rail

As with all CONTA-CLIP PE terminals, the **FDLI** terminals also implement a two-sided contact with the DIN rail. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.

Installation feed-through terminals FRKI | Protective-earth terminals FSLI | Neutral disconnect terminals FNT

Our Push-in single-level installation terminals **FRKI / FSLI** are divided into three functional groups: feed-through, protective earth, and neutral disconnect terminals.

The neutral-disconnect terminals **FNT** are designed to accommodate a 10 x 3 mm neutral wire busbar. No additional holding plate is required. A secure contact to the neutral busbar is established using the no-screw slider for the neutral conductor.

With the **FSLI** protective earth terminals, the PE potential is connected with the DIN rail via the PE foot (which contacts the DIN rail on both sides).

Solid wires and flexible wires with wire-end ferrules can be inserted into the connection mechanism without the need for tools. The Push-in spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. A standard screwdriver can be used to open the clamp for release when inserting the stranded wire without ferrules.

The advantages

- Wire insertion requires no tools
- Less insertion force
- PE foot contact on both sides
- Comprehensive marking options

Features

- Push-in connection system
- Installation feed-through terminal up to 16 mm²
- Separating the contact via screwdriver
- Pluggable cross-connection system FQI/SQI
- Material: PA6.6 UL 94 V-0

Features

Combinations with the FDLIS three-level installation terminal

The one-level terminals **FRKI**, **FSLI**, and **FNT** can be used in combination with the three-level **FDLIS** installation terminals because the height of the neutral busbar is identical in both versions.

Installation terminals FRKI 16

The **FRKI** terminals in the rated cross-sections 16mm² are also available in a variant with central rail foot for the TS 35. They offer in this way a symmetrical arrangement when the neutral busbars are not used.

Neutral disconnect terminals FNT

The neutral disconnect terminals **FNT** from 2.5 to 16 mm² are designed to accommodate a 10 x 3 mm neutral busbar. No additional holding plate is required. A secure contact to the neutral busbar is established using the no-screw slider for the neutral conductor.

Connecting the PE foot onto the DIN rail

As with all CONTA-CLIP PE terminals, the **FSLI** terminals also implement a two-sided contact with the DIN rail. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.

Push-in connection system

Three-wire installation terminals FDLIS

With a width of just 5 mm, the **FDLIS** series is available in seven versions and connects with stranded or solid wires up to 4 mm² with a rated current of up to 32 A. Solid wires and flexible wires with wire-end ferrules can be inserted into the connection mechanism without the need for tools. The Push-in spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. A standard screwdriver can be used to open the clamp for release or for the insertion of stranded wire without ferrules. The version with neutral disconnection is designed to accommodate a 10 x 3 mm neutral wire busbar. There is no need for an additional fixing plate because the NT terminal snaps securely into place on the neutral busbar. The result is optimised storage and costs, combined with the added advantage of saving 1.5 mm for each fixing plate when mounting side-by-side on the DIN rail. CONTA-CLIP's PE foot, which contacts the PE potential to the DIN rail, is designed to make contact on both sides. This means that more material is required; however this offers more safety in the area around the protective earth contact.

In addition to the **FDLIS** series of individual terminals and all the advantages that they have to offer, CONTA-CLIP also offers pre-assembled terminal blocks. This product line contains six different blocks of terminals in common combinations for 1- to 3-phase installations. In addition to the above-mentioned advantages that the individual terminals offer, the use of these standard blocks saves time when installing the distribution wiring and results in extra optimization of work flows and storage costs. Thanks to the special foot design of these terminal blocks, simple snapping in and removal of the rail is ensured. CONTA-CLIP therefore provides the ideal supplement in the area of installation technology.

The advantages

- Wire insertion requires no tools
- Less insertion force
- PE foot contact on both sides
- Comprehensive marking options

Features

- Push-in connection system
- Three-wire installation terminals 4 mm²
- Separating the contact via screwdriver
- Pluggable cross-connection system FIQI
- Off-the-shelf block variants
- Material: PA6.6 UL 94 V-0

Features

Wire connections

Solid wires and flexible wires with wire-end ferrules can be inserted into the connection mechanism without the need for tools. Connection cross-section of 4 mm, solid or flexible wire with wire-end ferrule. Rated current 32 A at only 5.1 mm single-terminal width. **FQI** cross-connections are pluggable and insulated. They are available from 2 to 10 poles and can be used to safely distribute nominal current on the **FDLIS** terminals.

Insert FQI

Connection without tools

Attaching and contacting neutral busbars

The neutral disconnect terminals have an integrated fitting and mounting system for the 10 x 3 mm neutral busbars. Thus, an additional fixing plate is not needed and design width is decreased for the terminal construction. Another advantage is the reduction in storage costs. The NT rail is quickly and securely connected with the terminal via a self-connecting, screw-less NT slider.

Connecting the PE foot onto the DIN rail

As with all CONTA-CLIP PE terminals, the **FDLIS** terminals also implement a two-sided contact with the DIN rail. As with the entire **FRK** series, the foot construction and busbar are made of a single piece of copper. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.

Block versions

Block version terminals are connected underneath each other with pegs. This results in increased design stability compared with individual terminals. All CONTA-CLIP block versions can be quickly and easily snapped on, with one hand grip, using a special latch in the terminal foot. Removing the blocks is just as quick – using the connected feet with the help of a screwdriver.

Initiator terminals FK

CONTA-CLIP has added the initiator terminals **FIK 2.5** to its CONTA-CONNECT range in the Push-in connection system.

In order to start-up electromechanical functions in machinery and facilities, a link must be established from signal emitters, actuators and alert sources with the controller. These signals are consolidated in decentralized units in order to reduce the wiring overhead and speed up the troubleshooting process. In the **FIK 2.5**, the upper level is used for the signal wiring and the lower level for the supply voltage, such as the positive/negative distribution. A separate power

supply terminal is not necessary, because each terminal block has the possibility to accommodate one wire up to 2.5 mm² with wire-end ferrules. The rated total current of the individual potentials is 24 A.

Push-in connection system

The advantages

- Wire insertion requires no tools
- Less insertion force
- Comprehensive marking options
- Variants with illuminated display for signalling the switching status

Features

- Push-in connection system
- Initiator terminal 4 mm²
- Separating the contact via screwdriver
- Pluggable cross-connection system FQI
- Material: PA6.6 UL 94 V-0

Push-in connection system

- Foot base can be snapped on TS 35 DIN rail
- Housing made of polyamide 6.6 UL 94 V-0

Overview

End plates

The **PAP** and **FAP** end plates are normally used at the end of a row of terminals. End plates must also be used within a terminal strip when it makes use of terminal blocks of different sizes in order to ensure touch-safe finger protection. The outer dimensions of the end plates match the dimensions of the terminal blocks.

Cross-connections

The cross-connections **PQI** and **FQI** are available from 2-, 3-, 4-, 10- and 20-pole. The pluggable cross-connection system allows you to save time while distributing potentials between terminal blocks of the same cross-section range. **PQI** and **FQI** have a pluggable design and are designed for the rated current and the rated voltage of the respective terminal block.

Labelling adapter

In addition to the standard holder in the terminal housing, you can also label the multi-level terminals **FRKD** using the Labelling adapter FBA. The **FBA** labelling adapter can be attached to the middle of the terminal housing.

Four-way covers FAD

VDE regulations require that the mains terminals are covered. The yellow **FAD** covers (labelled with a lightning flash) are used to cover the operational channel. Thus, they discourage operation of the terminal while live voltage is present.

Test plug

The test plug **PS 2.3** enables a direct measurement to be made at the test pick-off of the terminal for PRK terminals.

Fuse holder ZS/.../.../ZTRK

The **ZS/.../.../ZTRK** plug-in fuse holders are available as models with or without a status display. When used together with the **FTRK 2.5** and **ZTRK 2.5** base terminals, they provide outstanding versatility and ease of use.

Disconnect-plug ZDS.../ZTR

The established disconnect-plug system has a high-quality surface and thus minimal contact resistance. This ensures precise, unbiased measurement readings. A variety of components can easily be soldered onto an unpopulated test plug.

Actuating tool BWMA/BW

The spring terminals with 2.5 mm² cross-section range can be operated using the **BW 1 to BW 10** and the **BWMA** metallic tools. The special **BW** tools enable you to open multiple terminals simultaneously.

End plates | Visual separation

Push-in connection
system

The **PAP** and **FAP** end plates are normally used at the end of a row of terminals. End plates must also be used within a terminal strip when it makes use of terminal blocks of different sizes in order to ensure touch-safe finger protection. The outer dimensions of the end plates match the dimensions of the terminal blocks.

Coloured end plates are often used to establish a clear visual separation between the different circuits or voltage levels. The locking pegs ensure that the end plates can be mounted quickly. Because of the special design of the **PRK** and **FRK** series, an end plate does not need to be used to separate neighbouring cross-connectors of different potentials.

End plates for standard-terminal blocks PRK/PSL, FRK/FSL

Insulated cross-connections PQI (potential distribution)

Push-in connection system

The **PQI** pluggable cross-connection system helps you to save time while distributing potentials over terminal blocks of similar or different cross-section ranges. The pluggable design of the **PQI** offers the advantage that it can carry the rated current even while operating at the rated voltage. **PQI** is constructed to protect

against accidental touch and is available in the cross-section range 1.5 mm² – 10 mm² in 2-20-pole.

Various potentials can be conducted in parallel for the cross-sectional range 1.5 mm² to 10 mm² without loss of poles. In order to help distinguish between different potentials, the PQI cross-connectors are also available in a blue variant.

With the standard terminal blocks, it is possible to skip over terminal blocks by breaking out individual contact poles.

For the 16 mm² cross-section range, cross-connections larger than two poles are implemented using the **PQI 16/2** in a chain bridge.

The cross-connection can be shorted using a cutting tool, but you must then make sure that the cut side is fitted with an end plate so that the voltage rating is maintained. For standard terminal blocks in the cross-section range from 1.5 mm², 2.5 mm² and 4 mm², it is adequate to attach the **PQIs** in an offset position (two cross-connection channels).

Important note:

When cutting, ensure that you do not change the shape of the contact elements of the **PQIs** (do not take them apart or press together).

Cross-connections PQI

Cross-connections PQI

The cross-connections for the **PRK** Push-in connection system have a pluggable, insulated design. They can be used to conduct the rated current of the corresponding cross-section range. The terminal block design and the variability of the cross-connector ensure excellent flexibility.

Insulated cross-connections FQI (potential distribution)

Push-in connection system

The **FQI** pluggable cross-connection system helps you to save time while distributing potentials over terminal blocks of similar or different cross-section ranges. The pluggable design of the **FQI** offers the advantage that it can carry the rated current even while operating at the rated voltage of 800 V! The **FQI** is

constructed to protect against accidental touch. It is available in 2 – 10 poles.

Parallel connections between various potentials, without loss of poles, is possible in the 1.5 mm², 2.5 mm² and 4 mm² cross-section ranges.

With the standard terminal blocks, it is possible to skip over terminal blocks by breaking out individual contact poles.

The disconnected contact elements can be labelled by using the plastic insulation from the cross-connection.

It is possible to shorten the cross-connection with a cutting tool, but you must then make sure that the cut side is fitted with an end plate so that the voltage rating is maintained. For standard terminal blocks in the cross-section range from 1.5 mm², 2.5 mm² and 4 mm², it is adequate to attach the **FQIs** in an offset position (two cross-connection channels).

In order to help distinguish between different potentials, other colour variants are available for the **FQI 1.5**, **FQI 2.5** and **FQI 4** cross-connectors.

Cross-connections FQI (potential distribution)

The **FQI** pluggable cross-connection system helps you to save time while distributing potentials over terminal blocks of similar or different cross-sections.

Feed-in through	Outlet through	Feed-in at start left	Feed-in at end right

Four-way covers FAD

Four-way covers FAD		FAD 1.5	FAD 2.5	FAD 4
VDE regulations require that the mains terminals be covered. The yellow ZAD covers (labelled with a lightning flash) are used to cover the operational channel. Thus, they discourage operation of the terminal while live voltage is present.

Overview

DIN rails

A wide variety of DIN rails are available, in two-meter sections or pre-cut as required. They vary in shape, size and material. They fit on various rail types (C profile **TS 32**, Automatic profile **TS 35**, compact rail **TS 15**), are made from steel, copper or PVC, and are available in slotted or unslotted versions.

End stops | End supports

End stops are necessary for preventing movement of components along the rail. They are put in at the beginning and at the end of the rail assembly. Depending on the DIN rail, they differ in the dimensions of the mounting foot and their screw-on or snap-on design. End stops can also be used to hold a variety of group marker holders. An end support with screw flange or snap-in clip ensures that the terminal block is securely attached to the mounting plates.

Group marker holders

Group marker holders allow you to clearly label terminal strip configurations. They are available in a variety of versions. Adhesive labels, paper strips or standard terminal markers are used for the labelling.

Touch-safe protection TWMF | RK-Safe-Box

Several safety regulations require that the active parts of electrical equipment be protected against direct touch contact. For terminals using cross-connectors or test sockets, this protection must be provided using additional covers. Cover profiles with assigned **TWMF** support plates are used for this purpose. They can be used with the main terminal sizes. Especially when used in front of the electrical meter for power distribution applications, the **RK-Safe-Box** is very effective at preventing unauthorized re-wiring or access to converter terminals

Screwdrivers

A wide variety of screwdrivers is available that has been customized to the CONTA-CONNECT range of products. They ensure that wires and cables are safely connected to CONTA-CLIP terminal blocks. These tools are available in insulated or uninsulated versions. They feature high-quality and long-lasting bits.

Terminal marker

Our extensive line of products feature ready-to-use markers with standard and customised print, unprinted markers in the classic MC Maxicard format for DIY printing with the **EMS** plotter, as well as marker holders and group label holders in a variety of designs. These tables provide an overview of which markers can be snapped onto which terminals. The pitch dimension is decisive when making a selection. For a 5 mm wide terminal, the marker must have a width of 5 mm so that it can be applied to the terminal in strips. If the marker is to be attached to a terminal with a larger pitch, then the strips must be separated into individual markers.

List of terminal markers available for CONTA-CLIP terminal blocks, end supports and marker holders

DIN rails TS

DIN rails TS 32 / TS 35

The design of the TS DIN rail complies with the European norm DIN EN 60715. The steel DIN rails are galvanized and have a coating of blue chromate that is at least 10 µm thick. We place extra importance on maintaining a high degree of dimensional accuracy. The steel DIN rails can be used as protective-earth busbars (with PE function) in compliance with DIN VDE 0611 part 3. Please note the following when using the rail as a PEN busbar:

- Only one E-Cu rail should be used.
- The short-circuit currents and the rated thermal currents must be observed.

The DIN rails are delivered in standard lengths of 2 meters. All DIN rails are also available in prepared (cut to length) versions, but all types are available pre-cut to customers requirements.

Marker holders for terminal blocks and end stops

Marker holders for terminal blocks and end stops

These marker holders provide a solution for marking a group of terminals or devices on the DIN rail. The marker holders are available for attaching to terminal blocks and end stops. The **GT1** and **GT2** group marker holders can be attached directly to the DIN rail. Depending on the type, they can be marked with SB and AS terminal markers. Custom marking is possible using the **BS-1 pen** or **EMS-2** plotter.

Partitions TWMF / TW | Cover profile AD

Cover profile AD combined with partition plates TWMF

Many safety requirements (for example, the "Electrical facilities and operating devices" accident prevention regulations (DGUV 3), or VDE 0106 part 100/3.83) require that the active components of equipment are protected against direct touch. For terminals using cross-connectors or test sockets, this protection must be provided using additional covers. Cover profiles with assigned support plates are used for this purpose.

They can be used with the main terminal sizes. The support plates can be positioned at the end or between groups of terminals. They can be attached to **TS 32** or **TS 35** DIN rails.

Partition with foot TWMF

Terminal block enclosure RK-Safe-Box

CONTA-CLIP's innovative **RK-Safe-Box** terminal block enclosure is a quick, simple way to protect the terminal blocks that you've installed on DIN rails (such as converter circuits) from being tampered with.

Especially when used in front of the electrical meter for power distribution applications, the **RK-Safe-Box** is very effective at preventing unauthorized re-wiring or access to converter terminals

The side walls border the mounting plate directly. They thus completely surround the protected components. Feed-through guides lead wires through the walls of the **RK-Safe-Box**. This simplifies wiring and makes it impossible to manipulate the terminals after the **RK-Safe-Box** is closed.

When the transparent lid is removed, the integrated slide mechanism permits you to extend the interior of the **RK-Safe-Box** by 16 mm. This makes it easy to perform maintenance and to replace terminals or components.

Features

- Easy and fast mounting to the TS 35 DIN rail
- Optimal mechanical attachment to the DIN rail
- Cannot be unlocked or snapped out of the DIN rail after it is mounted
- Triple seal option
- Transparent lid
- Tampering is immediately recognizable
- Slide mechanism on the two enclosure halves provides improved access for internal component maintenance.

Terminal block enclosure

- Mounts on TS 35 rail
- Housing made of polyamide 6.6 UL 94 V-0
- Material lid: polycarbonate UL 94 V-2
- 3-way sealing options
- Slide mechanism for maintenance

Terminal markers | Pocket-Maxicard PMC SB

Pocket-Maxicard PMC SB 4

The **PMC SB 4** Pocket-Maxi-Card is suitable for labelling all CONTA-CLIP terminal blocks that are wider than 4 mm.

They are available in a variety of pre-printed standard markers, in a blank version, or custom printed to any requirement.

Material: polyamide 6.6 UL 94 V-2, halogen-free

Terminal markers – Pocket-Maxicard PMC SB

Pocket-Maxicard PMC SB 6

The **PMC SB 6** Pocket-Maxi-Card is suitable for labelling all CONTA-CLIP terminal blocks that are wider than 6 mm.

They are available in a variety of pre-printed standard markers, in a blank version, or custom printed to any requirement.

Material: polyamide 6.6 UL 94 V-2, halogen-free

Terminal markers – Pocket-Maxicard PMC SB

Pocket-Maxicard PMC SB 8

The **PMC SB 8** Pocket-Maxi-Card is suitable for labelling all CONTA-CLIP terminal blocks that are wider than 8 mm.

They are available in a variety of pre-printed standard markers, in a blank version, or custom printed to any requirement.

Material: polyamide 6.6 UL 94 V-2, halogen-free

Terminal markers – Pocket-Maxicard PMC BSTR

Pocket-Maxicard PMC BSTR 5

The **BSTR 5** Pocket-Maxicard is suitable for labelling all CONTA-CLIP terminal blocks that are wider than 5 mm. These are particularly suitable for longer sequences of characters.

The **BSTR 5/... MI** variants are fitted with a centrally positioned foot that is used when the standard **BSTR** markers cover the cross-connection channel or the wire entry. Available in many ready-made standard markings.

They can be delivered in the following colours: white
Material: polyamide 6.6 UL 94 V-2, halogen-free

Terminal markers – Pocket-Maxicard PMC BSTR

Pocket-Maxicard PMC BSTR 10

The **BSTR 10** Pocket-Maxicard is suitable for labelling all CONTA-CLIP terminal blocks that are wider than 10 mm. These are particularly suitable for longer sequences of characters.

They are available in a variety of pre-printed standard markers, in a blank version, or custom printed to any requirement.

Material: polyamide 6.6 UL 94 V-2, halogen-free

Notes

Terminal markers | Quick marking system SB

Quick marking system SB 5

The **SB 5** quick marking system is suitable for labelling all CONTA-CLIP terminals that are wider than 5 mm. They are available in a variety of standard, prefabricated markers or with custom labelling.

The **SB 5** blank markers are available as **MC SB 5/200 WH**. They can easily be printed on using the **EMS** plotter system.

Material: polyamide 6.6 UL 94 V-2, halogen-free

Terminal markers | Quick marking system SB

Quick marking system SB 8

The **SB 8** quick marking system is suitable for labelling all CONTA-CLIP terminals that are wider than 8 mm. They are available in a variety of standard, prefabricated markers or with custom labelling.

The **SB 8** blank markers are available as **MC SB 8/160 WH**. They can easily be printed on using the **EMS** plotter system.

Material: polyamide 6.6 UL 94 V-2, halogen-free

Our products for your challenges:

01 CONTA-CONNECT
Terminal blocks
with Push-in connection system
Cat. no. 98070.2

02 CONTA-CONNECT
Terminal blocks with screw connection
system and special terminals
Cat. no. 98071.2

03 CONTA-CONNECT
Terminal blocks
with tension-spring connection
Cat. no. 98072.2

04 CONTA-CONNECT
Installation materials and
other accessories for terminal blocks
Cat. no. 98073.2

05 CONTA-LABEL
Marking components
for thermal-transfer marking systems
Cat. no. 98074.2

06 CONTA-LABEL
Marking components
for ink-based marking systems
Cat. no. 98075.2

07 CONTA-BOX
Housings
Cat. no. 98076.2

08 KDS Cable management systems
KDS cable entries,
KES cable entries,
SAB/SSAB/SABK shielding solutions
Cat. no. 98077.2

09 CONTA-ELECTRONICS
Electrical and electronic cabinet components
Cat. no. 98078.2

10 CONTA-CON
PCB terminals and connectors
Cat. no. 98079.2
