

Pluggable tension-spring connection system ZST

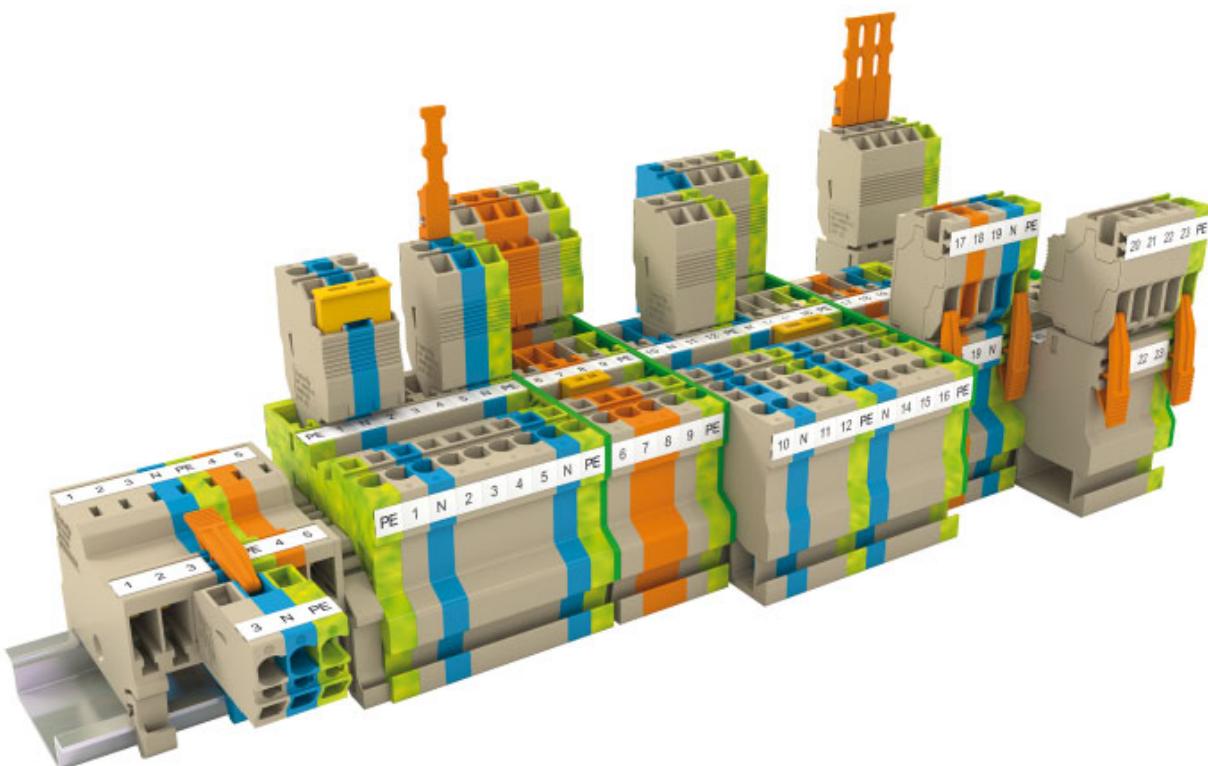

Pluggable tension-spring connection system ZST

CONTA-CLIP's modular and flexible **ZST** connection systems are in high demand wherever off-the-shelf units need to be connected or replaced. Pluggable wiring is thus permitted up to a rated current of 24 A and a rated voltage of 500 V.

Advantages of the ZST tension-spring connection system:

- Quick installation and mounting
- Flexible and modular building block principle
- High level of wiring safety due to unique coding option
- Highest mechanical stability of the pluggable elements in the base terminals

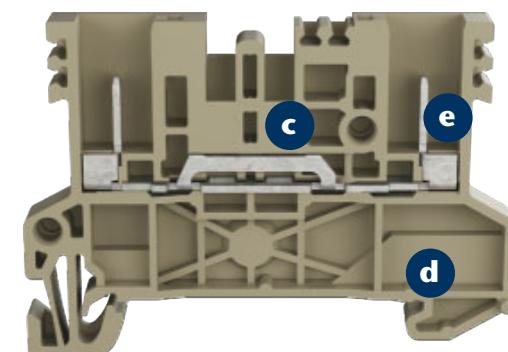

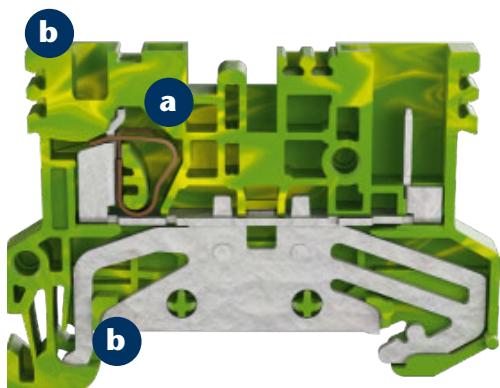

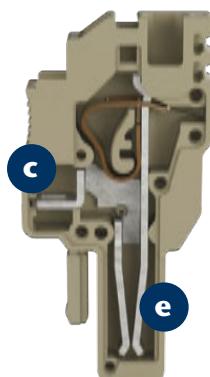

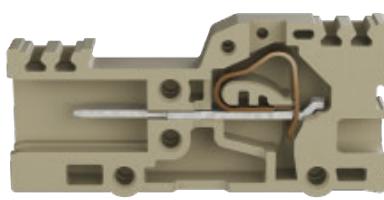

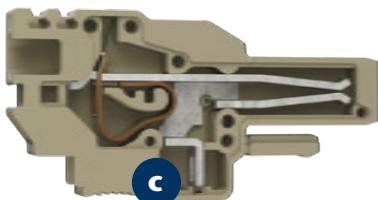

Pluggable tension-spring connection system ZST

a The connection | Contact security

The tension spring for the wire connection is held securely by the busbar.

- The stainless steel spring provides permanent contact force between the wire and the busbar
- There is a clear separation of electrical and mechanical functions
- The busbars are made from copper with tin surface coating
- Resistant to vibration and maintenance-free
- Corrosion-free
- Space-saving design

c Pluggable cross-connection options

- Available in 2 – 10 and 99 poles (for custom assemblies)
- Simple to insert and thus quicker to install
- No insulation plates or partition plates required between neighbouring cross-connections, since the **ZQIs** have a touch-safe protective design
- Cross-connection can carry the full rated current and voltage of the corresponding terminal block
- Individual terminals can be skipped over by breaking out contact pins in the cross-connector

d Housing insulation material

- Polyamide PA6.6 UL 94, flammability class V0, self-extinguishing without burning drops
- Free of hazardous materials such as halogen or phosphor
- Creepage resistance: CTI 600
- Temperature resistant -40°C to +120°C

e Pluggable contact

- Rated current 24A
- Rated voltage 500V
- Vibration resistant
- Codable

Pluggable tension-spring connection system ZST

The base terminals and plugs can also be fitted with a snap-on locking latch. A snap-in strain relief mechanism ensures that the connected wires have a stable mechanical attachment to the terminal block.

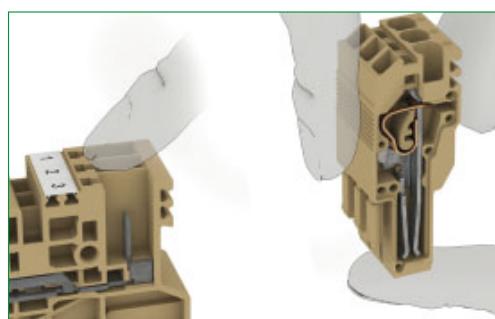

Distributing potentials with the pluggable **ZQI** cross-connection system is quick and easy. It is possible to skip over terminals by breaking out individual contact elements.

The special alloy of the contact material and the shape of the contact spring both guarantee a secure contact even in the most extreme vibration conditions.

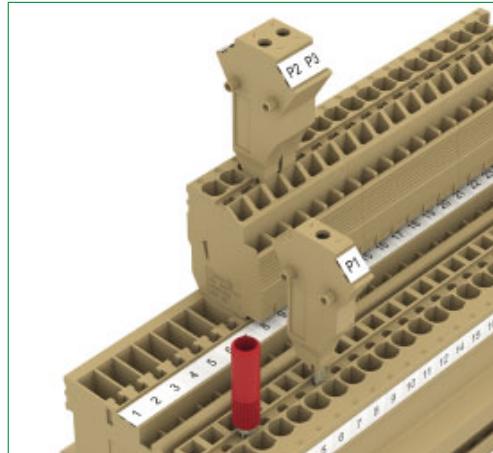

The base terminals and the pluggable versions are designed so that they are finger-touch safe. This feature provides excellent protection for the user and also permits power to be fed-in via the terminal or the plug.

Pluggable tension-spring connection system ZST

A direct measurement can be carried out at the busbar on the corresponding terminal by using test plugs. The test adapters can be assembled to any pole count using the locking pegs. They can be used to test assembled terminal blocks in a quick and safe manner.

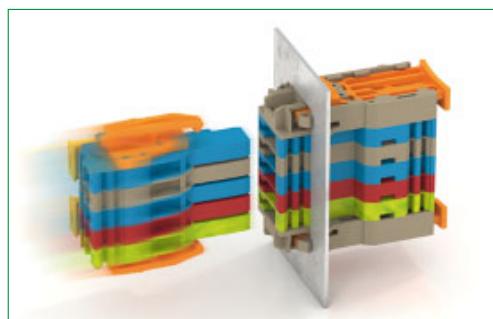

Using our **CONTA-CLIP** coding system, you can code your base terminals and plug couplings to protect them against plugging errors – without any loss of poles.

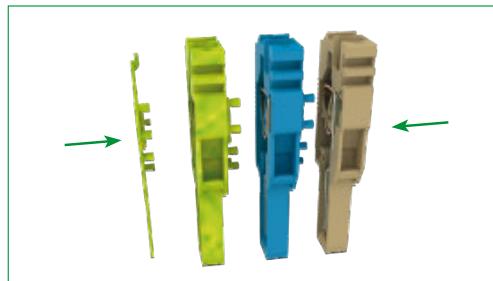

The **ZSTK 2.5** plug coupling is suitable for applications with low height restrictions. These couplings are available for TS 15 and TS 35 DIN rail mounts or as flying leads.

Effective wall bushings can be constructed simply by snapping the **ZST-WA** wall-bushing mounting adapter onto the **ZSTK 2.5/.../B** coupling element. These multi-pole units snap on sideways to the wall; the pressure on the inner slide mechanism ensures a secure attachment to the housing! The outer connector unit can be optionally fitted with locking elements.

The base terminals and the pluggable versions can be individually linked and configured according to your application requirements.

Pluggable tension-spring connection system ZST

Pluggable tension-spring connection system

- Versatile mounting on TS 15, TS 35 or as flying lead coupling
- Finger-touch safe construction

Wall bushing for ZST

CONTA-CLIP's modular and flexible ZST connection systems are in high demand wherever off-the-shelf units need to be connected or replaced. Pluggable wiring is thus permitted up to a rated current of 24 A and a rated voltage of 500 V.

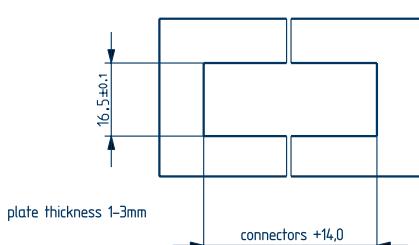

Effective panel feed-through bushings can be constructed simply by snapping the **ZST-WA** mounting adapter onto the **ZSTK 2.5/.../B** coupling element. These multi-pole units snap on sideways to the panel; the pressure on the inner slide mechanism ensures a secure attachment to the housing! The outer connector unit can be optionally fitted with locking elements.

Advantages of wall bushings for the ZST:

- Quick installation and mounting
- Flexible and modular building block principle
- High level of wiring safety due to unique coding option
- Outstanding mechanical attachment of the pluggable elements in the coupling element for the wall bushing

Creating the cut-out in the wall

The height of the rectangular cut-out in the wall does not change. The length, however, varies depending on the number of aligned poles in the coupling/plug unit.
